Welcome to ICL Lab, serving the scientific community by providing unmatched value and exceptional immunoreagents. Please follow the link above to look at a large selection of ELISA kits, primary and secondary antibodies and other Life Science reagents.

Manufacturer of Antibodies, Antibody Conjugates, Elisa

The invention of ELISA and its types are presented in a sequence. â€¢ Laboratory experiences with peptide analyses are provided. â€¢ The need to use protease inhibitors to protect peptides in peptide analyses is emphasized.

A short history, principles, and types of ELISA, and our

Saliva testing is a diagnostic technique that involves laboratory analysis of saliva to identify markers of endocrine, immunologic, inflammatory, infectious, and other types of conditions.

Saliva testing - Wikipedia

Monoclonal antibodies (mAb or moAb) are antibodies that are made by identical immune cells that are all clones of a unique parent cell. Monoclonal antibodies can have monovalent affinity, in that they bind to the same epitope (the part of an antigen that is recognized by the antibody).

Monoclonal antibody - Wikipedia

Thyroid autoantibodies are antibodies that develop when a person's immune system mistakenly targets components of the thyroid gland or thyroid proteins, leading to chronic inflammation of the thyroid (thyroiditis), tissue damage, and/or disruption of thyroid function.

Thyroid Antibodies - Lab Tests Online

4 laboratory testing available to support the diagnostic use for Lyme disease, all are designed to detect immune responses to antigens of particularly IgM and IgG (FDA, 2010).

Laboratory Diagnostic Testing for Borrelia burgdorferi

Guidelines for the detection and characterisation of clinically relevant antibodies in allotransplantation Page 3 of 94 Disclaimer: These Guidelines are guides to best practice, which inevitably change with the passage of
